

The sensory room arrests developmental delays and includes equipment of different scales, focused on visual and tactile toys and equipment

Optic Fibres, Starlight and Vision Stimulation Box are used for Vision Perception and Liya symbol activity

The room has various stimulants for sensory organs – visual, auditory, tactile, olfactory and gustatory.

Samerth Talim Kendra

is a daycare centre, initiated in 2006, providing rehabilitative services to children with intellectual and mental disabilities from the most vulnerable and marginalised areas of Ahmedabad

The immediate impact seen in children who frequent the centre is improved hand-eye coordination and improved vision. The activities are great for bringing focus to a hyperactive child. The designed sensorial focus through colourfully pleasing and relaxing spaces creates a calming and stimulating effect, leading to sensory development.
